

Introducing *Instrument Manager v9.01.00*

Your Lab. Your Mission. Ultimate Control.

Leading clinical laboratories choose Instrument Manager™ (IM) middleware for its vendor-neutral connectivity, robust scalability, and technology that optimizes lab workflows while improving patient care.

They also gain a laboratory partner that listens to their challenges as market forces change – challenges such as connectivity complications that come with mergers and acquisitions, increasing cybersecurity threats, and tightening regulatory requirements.

Enter Instrument Manager v9.01...

This major software release helps labs stay securely ahead of evolving cybersecurity demands, while functional enhancements help IT and laboratory administrators improve efficiencies and quality of care.

By reducing startup times, enabling multi-domain LDAP authentication and improving security, IM v9.01 supports hospital consolidation trends and the increasing demand for resilient, compliant lab infrastructure.

In addition, a refreshed and upgraded Moving Averages application provides an improved user experience for labs that want to stay one step ahead of quality control issues.

New Features of *IM 9.01.00*

The most secure IM version yet – strengthening your organization's resilience to cyber threats.

Reduced downtime through improved start-up and failover efficiency.

Multiple domain authentication that ensures secure and seamless access for staff across different organizations.

Updated Moving Averages application, integrated with the DI Gateway, offering improved technology and modernized user interface for better tracking of instrument quality deviations.

How IM v9.01 *Benefits Your Team*

IT Admin | Lab Manager

Stay ahead of cybersecurity risks and compliance requirements with robust, updated security features and regulatory alignment.

IM's database platform has been upgraded to IRIS 2025.1 for faster performance and improved stability.

IT Admin | Medical Tech

Experience smoother upgrades and less disruption, thanks to faster system startups and reduced failover times.

IM now starts up with no delay between each connection, decreasing downtime for failovers and startups/restarts.

Network Admin

Easily manage users in diverse environments with enhanced multi-domain support, simplifying enterprise management.

New multi-domain LDAP functionality reduces administrative costs through streamlined user management across different organizations.

Upgrade *Guidance*

To ensure your lab's security and optimal IM performance, it is critical to remain updated on the most recent version of Instrument Manager. As you plan to upgrade to v9.01, please ensure your physical or virtual server meets the following supported Microsoft Operating Systems:

- Windows 11 Professional
- Windows 10 Professional
- Windows Server 2025
- Windows Server 2022
- Windows Server 2019
- Windows Server 2016

Ready to *Upgrade?*
